

TVS200HD

FORWARD FACING HD CAMERA DVR WITH
GPS AND PASSWORD PROTECTED ACCESS
TO THE VIDEO FOOTAGE

The TVS200HD is completely tamper-proof, eliminating any unauthorised intervention from vehicle drivers. A unique password feature gives the manager the ability to limit who can have access to the video footage.

The camera has 32GB internal memory which can be accessed by simply detaching the camera and plugging it into a PC to download the footage through password access.

The camera has 2 modes. Continuous recording mode is activated when you start the engine, and three minute clips are saved, which will then be on an auto loop recording system ensuring all crucial evidence is recorded.

Incident recording mode works using the internal G-sensor function. When the G-sensor function detects an impact it will automatically save the clip before and after the event into a separate file. An SOS button enables the driver to instantly take a short clip of footage and a photo, ensuring that the incident or event footage is saved.

Item	Specification
Lens	140 degrees
Display	1.5" TFT LCD
Recording Resolution	1080p at 30fps
Loop Recording	Supported
GPS	Built-in
WiFi	No
Video Format	MOV
Picture Format	JPG
G-Sensor	Support
Memory Card	32GB Built in – No Card Required
Battery	300mAh 3.7V
USB	USB 2.0
Menu Language	English

- **Tamper-proof**
- **Internal 32GB memory**
- **Encrypted**
- **Pin Code Protected**
- **Full HD**
- **Journey maps with GPS**
- **Low-light performance**
- **SOS mode**
- **Wide angle coverage**
